

#12 ITS Connect Now

Elite Club #32 April 2018

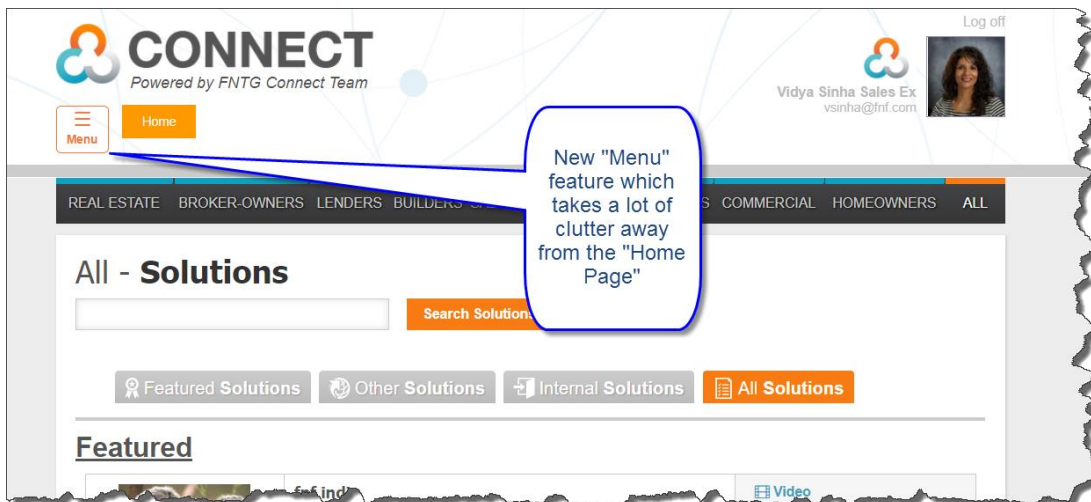

Coming Soon -
Look out for the following changes to ConnectNow!

Same functionality but a brand the UI:

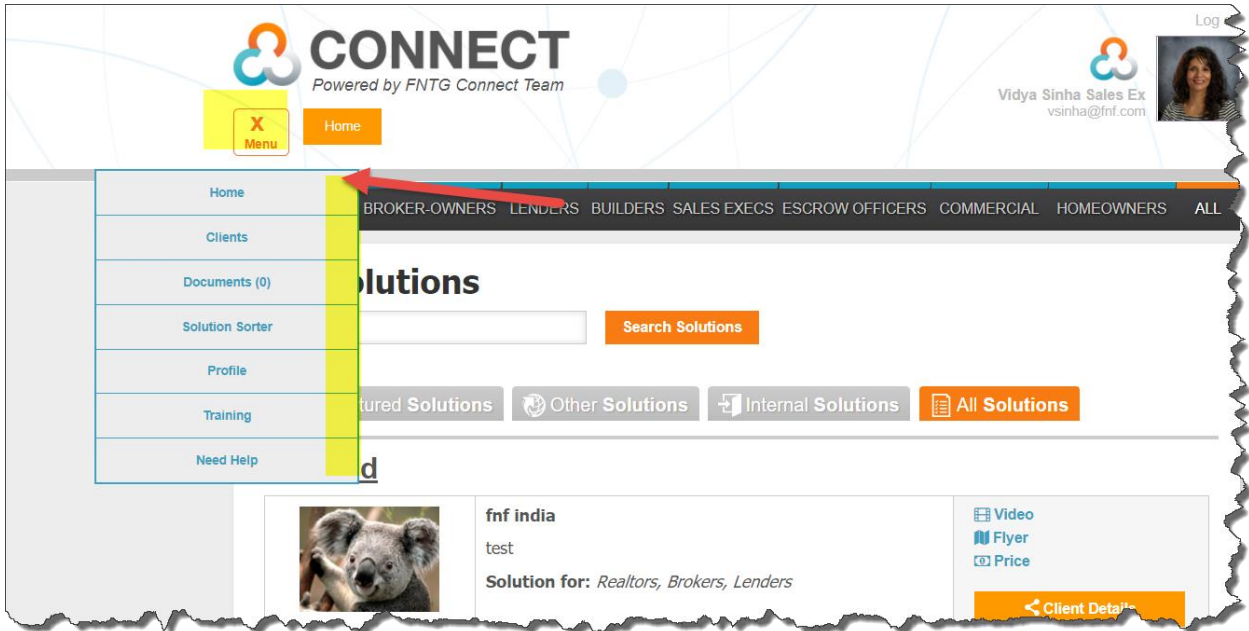

1. New log in page

2. New "Menu" feature which frees up a lot of the content from the "Home Page"

- List of menu items added in hamburger menu format (pull-down) to free up space on Home Page.

- Status Activity Alerts – Many of our solution providers are providing status back of activities that have taken place once a referral is placed by the sales executive. They will contain information such as “last login” to the solution by the client or “Purchased Product”, etc. These are the status back alerts that the solution providers are sending back to Connectnow. The alerts will appear on the Home Page once a sales exec logs into ConnectNow. The sales executive can click on a link and view more details of the status activities for specific clients.

- An email alert will also be sent to the sales exec informing of changes to a client’s referral.
